

DDA 78-0832

Comptroller  
4E 42 Hqs

Jim:

Here is the "decision sheet" I mentioned to you on the phone on Wednesday re the session at [redacted]. While I had mentioned I would annotate it, I believe it better on second thought to have you look at it then I will sit down and make certain observations to you. Give me a buzz when you're ready.

John F. Blake

Organizational Decisions

17-18 February 1978

STAT

- National requirements will flow from the PRC to NFAC for action and the NITC/RMS for info. After interpretation by NFAC they will be translated into action requests and transmitted through RES to NITC. *ONLY FOR CIA*
- The NITO is to be the point for integration of the capabilities of all systems and will make necessary tradeoffs between the various disciplines in meeting short and long term Community requirements. This process will be expressed in a matrix of priorities for specific targeting.
- Current methods/institutions for translating analytical requirements into system tasking will be preserved as much as possible until the new procedures are functioning effectively.
- The NITC will be most immediately useful by proving in the short term its capability to bring assets to bear on a problem of current concern.
- NITC will prepare DCID-1/2 which will become the short range operational planning document for the collectors use in making priority judgments.
- D/NFAC will emphasize his responsibility for coordinating production efforts and assuming across-the-board quality supervision for all Community products which support national requirements.
- RMS evaluation of NFAC will be limited to broad questions of overall effectiveness and efficiency. It is understood that a legitimate part of this will be examination of the output product but this examination will be restricted to a determination of the validity of gross allocation of resources requested by NFAC and will not include analysis for the purpose of product improvement.
- RMS will prepare budget guidance and a new Long Range Planning document for Collection Systems R&D and acquisition guidance.
- RMS has the responsibility for determining the boundary between National and Tactical Systems and making tradeoffs between National and Tactical Systems. D/RM will represent the DCI on the DoD DSARC.
- No decision was made on the split of evaluation responsibility between NITC and RMS. The DCI concluded that each had a role and D/DCI and D/RM were not far apart. DCI was inclined to reign in the CT on budget submission processing in order to limit the burden on the program managers. CT should obtain budget info and program rank orders from RMS. The CT should
